---

Local communities in Georgia, with USDA Natural Resources Conservation Service (NRCS) assistance, have constructed over 350 dams since 1953. Many of these dams are nearing the end of their 50-year design life. Maintenance and rehabilitation of these dams is needed to address critical public health and safety issues in these communities. The following presentation will provide background and case studies of maintenance and rehabilitation needs of watershed dams across Georgia as well as progress toward rehabilitation accomplishments.
